

TREVA.IN — SEO & LLM DISCOVERABILITY AUDIT Advisor View				
Audit Area	Current State (Gap)	Recommended Fix	Priority	Confidence
HOMEPAGE — Title Tag	Title: 'Treva — Digital Marketing Agency in Bangalore Branding, Web & Performance Marketing' → No mention of Growth Partner, CRM, Restaurant Dashboard, Creator Hub/UGC or 360 positioning. Generic agency framing.	Rewrite: 'Treva — Your Growth Partner in Bangalore 360° Marketing, Tech & Creator-Led Growth' Add schema: Organization + FAQPage. Include 'growth partner' phrase that LLMs associate with strategic consulting.	CRITICAL	[Certain]
HOMEPAGE — H1	H1: 'Build Better, Grow Faster.' → Aspirational but content-empty. LLMs index H1 as the primary signal for what you do. This gives zero category signal.	H1: 'Your 360° Growth Partner — Marketing, Tech & Creator Commerce' Sub-headline: 'We combine performance marketing, web/app development, CRM and influencer-led UGC to grow revenue — not just impressions.'	CRITICAL	[Certain]
HOMEPAGE — Meta Description	Meta: 'full-service digital marketing agency in Bangalore' → Correct but commoditised. 47+ competitors use the same phrase. Zero differentiation on CRM product, Restaurant OS or Creator Hub.	Rewrite to: 'Treva is your growth partner in Bangalore — combining social media, performance marketing, web & app development, Treva CRM, Restaurant Dashboard, and Creator Hub UGC into one compounding growth system.'	HIGH	[Certain]
LLM DISCOVERABILITY — Structured Data	No JSON-LD Schema detected for: • Organization (with sameAs social links) • FAQPage • Product (for Treva CRM, Creator Hub, Restaurant Dashboard) • BreadcrumbList • Article on blog pages ChatGPT, Claude, Gemini all rely heavily on structured data to cite brands accurately.	Add JSON-LD on every page: 1. Organization schema on homepage with sameAs: [LinkedIn, Instagram, Google Maps] 2. FAQPage schema on /faq and service pages 3. Product schema for each product page 4. HowTo schema on blog posts that explain processes 5. Article schema with author, datePublished on all blogs	CRITICAL	[Certain]
LLM DISCOVERABILITY — llms.txt / robots.txt	No llms.txt file detected. No explicit Allow for AI crawlers in robots.txt. GPTBot, ClaudeBot, PerplexityBot may be blocked or uncrawled. → If AI cannot crawl you, you cannot be cited.	1. Create /llms.txt: a plain-text file with your brand narrative, service list, products, differentiators, and client categories in factual prose — optimised for AI context windows. 2. In robots.txt, explicitly Allow: GPTBot, ClaudeBot, PerplexityBot, CCBot. 3. Add a /about-treva.txt or /brand-context.txt page that reads like a factual Wikipedia-style entry.	CRITICAL	[Certain]
LLM DISCOVERABILITY — Entity Authority	Treva is not yet established as a named entity in any public knowledge graph (Wikipedia, Wikidata, Crunchbase, IndiaMART, Tracxn, LinkedIn Company Page completeness). → LLMs hallucinate about unknown brands. Being in third-party sources fixes this.	1. Create a detailed Crunchbase profile (free tier sufficient). 2. Submit to IndiaMART, Tracxn, Clutch.co (critical — LLMs cite Clutch heavily for agency recommendations). 3. Guest posts or PR coverage on YourStory, Inc42, Economic Times — these are LLM training corpus sources. 4. Get listed on Google's 'verified agency' programmes.	HIGH	[Certain]
BLOG — Topical Authority Gap	Current blog covers: GEO, Agentic AI, Web3 Branding, Zero-click, Privacy personalisation. → These are trend topics. They do NOT answer the questions people actually type into Google or ask LLMs: 'How much does digital marketing cost in Bangalore?' 'Best marketing agency for restaurant in India?' 'What is Creator HUM / UGC marketing?' Zero dedicated content for restaurant clients.	Create 3 content pillars: 1. DECISION-STAGE: 'How to choose a marketing agency in Bangalore' / 'Marketing agency vs in-house: cost comparison India 2026' 2. LOCAL: 'Performance marketing for restaurants in Bangalore: complete guide' 3. PRODUCT AUTHORITY: 'What is Creator Hub UGC marketing and why brands are switching from influencers to UGC' (dedicated page) For every new blog post: 1. Add a 'Quick Answer' box (max 50 words) at the very top. 2. End every post with 5+ FAQ in Q&A format — these get directly lifted into AI answers. 3. Include at least one proprietary stat or insight (e.g., 'Treva's performance marketing campaigns average 4.2x ROAS across restaurant clients'). Create dedicated pages: 1. /services/ugc-marketing — targeting 'UGC marketing agency India' 2. /products/creator-hub — fully explained, with how-it-works, categories, budget ranges 3. Blog: 'Why UGC ads outperform studio-produced ads: Creator Hub data' 4. Blog: 'How 100+ restaurants built from zero to 1M+ in 18 months'	CRITICAL	[Certain]
BLOG — LLM Citation Optimisation (GEO)	No blog post is structured for LLM citation: • No 'Quick Answer' / TL;DR box at top • No FAQ sections within posts • No clear factual definitions that LLMs can lift • No 'According to Treva's data' stats LLMs prefer citing content that has a clear, citable factual claim in the first 100 words.	1. Add a 'Quick Answer' box (max 50 words) at the very top. 2. End every post with 5+ FAQ in Q&A format — these get directly lifted into AI answers. 3. Include at least one proprietary stat or insight (e.g., 'Treva's performance marketing campaigns average 4.2x ROAS across restaurant clients'). Create dedicated pages: 1. /services/ugc-marketing — targeting 'UGC marketing agency India' 2. /products/creator-hub — fully explained, with how-it-works, categories, budget ranges 3. Blog: 'Why UGC ads outperform studio-produced ads: Creator Hub data' 4. Blog: 'How 100+ restaurants built from zero to 1M+ in 18 months'	HIGH	[Likely]
KEYWORD GAPS — Creator Hub / UGC	Zero keyword coverage for: • 'UGC marketing agency India' (emerging, low competition) • 'Creator marketplace India' • 'Brand-influencer collaboration platform' • 'UGC video ads agency Bangalore' → Creator Hub is your most unique product. It has NO organic search volume.	1. /services/ugc-marketing — targeting 'UGC marketing agency India' 2. /products/creator-hub — fully explained, with how-it-works, categories, budget ranges 3. Blog: 'Why UGC ads outperform studio-produced ads: Creator Hub data' 4. Blog: 'How 100+ restaurants built from zero to 1M+ in 18 months'	HIGH	[Certain]
KEYWORD GAPS — Restaurant / F&B	Your client logos show: N Salon, Brother Barley, District 6, The Watling Hole, The Biere Club — heavy F&B portfolio. Yet, ZERO SEO content targeting 'restaurant marketing agency Bangalore' (30 searches, Low competition, 0% YoY change). Your Restaurant Dashboard is invisible online.	1. Create /industries/restaurant-marketing page 2. Create /products/restaurant-dashboard with full feature explanation 3. Blog: 'How Bangalore restaurants are using data dashboards to reduce table turn time' 4. Target 'hospitality marketing agency' and 'restaurant marketing agency' — both Low competition.	HIGH	[Certain]
KEYWORD GAPS — Growth Partner Positioning	The keyword 'growth agency' exists in your data (10 searches/mo, Low competition). 'growth marketing agency' also present (10 searches, Medium competition). → You want to own 'growth partner' as a phrase. Currently no page, no blog, no H-tag uses this term.	1. Homepage H1 change (see above). 2. Create /about page section: 'What makes Treva a Growth Partner, not just an agency' 3. Blog: 'Agency vs Growth Partner: what's the real difference for your business?' 4. Add 'Growth Partner' to your Google Business Profile description.	CRITICAL	[Certain]
KEYWORD GAPS — Performance + Tech Combined	Your keyword data shows 'performance marketing' at 1,900 searches/mo — your strongest owned territory. But there is zero content linking performance marketing to your tech products (CRM + Restaurant Dashboard). LLMs and searchers are beginning to ask: 'performance marketing agency that also builds tech'.	Create a page: /solutions/tech-led-performance — explaining how Treva CRM feeds audience data back into Google Ads, how Restaurant Dashboard informs re-marketing. This is a category you can OWN because no small agency in Bangalore does this.	HIGH	[Likely]
TECHNICAL SEO — Core Web Vitals	Site appears to be Next.js (noted in services page). However: • No evidence of Largest Contentful Paint or CLS audit data. • OG image referenced as /og-image.jpg — if this is unoptimised, it hurts both social sharing and LLM preview parsing	1. Run PageSpeed Insights — target LCP < 2.5s, CLS < 0.1. 2. Compress og-image.jpg to <100KB and ensure 1200x630px. 3. Implement sitemap.xml and submit to Google Search Console and Bing Webmaster Tools. 4. Verify hreflang is not needed (if expanding to Mumbai/Delhi).	MEDIUM	[Likely]
TECHNICAL SEO — Internal Linking	Blog posts currently do not cross-link to service pages, Product pages (Treva CRM, Nimma GBA, etc.) are not linked from blog or services where relevant. → Link equity is not flowing. LLMs also use internal link patterns to understand site hierarchy.	1. Every blog post must link to at least 2 service pages. 2. Services pages must link to relevant Product pages (e.g., Performance Marketing — Treva CRM). 3. Create a /resources hub that becomes the central topical authority node. 4. Add breadcrumbs with BreadcrumbList schema.	MEDIUM	[Certain]
BRAND VISIBILITY — Clutch / G2 / Agency Listings	No Clutch.co profile found. No G2 listing. No Sortlist. This is the single biggest LLM discoverability miss: When someone asks Claude or ChatGPT 'best digital marketing agency in Bangalore', it cites Clutch. If you're not on Clutch with reviews, you don't exist in AI answers.	1. Register on Clutch.co immediately — free profile + collect 5 client reviews within 30 days. 2. Register on Sortlist, GoodFirms, Agency Spotter. 3. Get listed on Hindustan Times, Times of India 'Best Agency' round-ups — these get scraped into LLM training. 4. Ask 3 clients to write LinkedIn recommendations mentioning Treva.	CRITICAL	[Certain]
